Auditor

Deloitte LLP, London, UK

CHAIRMAN'S STATEMENT

I am pleased to advise that despite the uncertainties surrounding financial services in the UK the Company has delivered a strong performance in 2018 with a pre-tax profit of £3.6m compared to an adjusted profit of £1.4m in the prior year (2017).

The prior year's profit of £14.9m had included a pre-tax gain of £13.0m from the sale of the Company's old offices in the City of London. When adjusting for this and other one-off items, the profit before tax was £1.4m.

Revenues have increased in line with the expansion of our real estate backed lending which continues to deliver high quality earnings. At the year-end, customer loans had increased by 19% to £289m. At the same time yields on the Company's investment securities increased in line with an increase in the underlying base rates. The Company's operating costs have increased marginally to £8.8m, compared to £8.6m in the previous year. Asset quality remains very strong with a low risk business model.

A significant amount of effort was involved during the year in preparing for changes in compliance regulations, particularly MiFID2 and GDPR alongside the implementation of the accounting standard IFRS 9.

This year marked the first full year in new premises in King William Street, which is close to Bank underground station. The move of premises has not just provided a modern working environment but has also enabled client and industry events to be hosted on site.

On behalf of the Board of Directors, I would like to express our thanks to our customers for their continued support and to our colleagues in the wider Alpha Bank Group who provide guidance and assistance to us in many ways. Finally, our thanks go to our great staff, without whose commitment and professionalism the Company would not have had such a successful year.

Mark E. Austen

STRATEGIC REPORT

History

Alpha Bank London Limited (“ABL” or the “Company”) was originally founded in 1922 as the Commercial Bank of the Near East PLC, providing services to customers located in, or with links to, Greece and neighbouring regions. The Company continues to serve the same communities, offering a range of commercial and private banking products to corporate and retail customers.

The Company has been a wholly-owned subsidiary of Alpha Bank AE (“Alpha Bank” or the “Parent”) since 1994. The Parent has operations in Greece, Cyprus, Romania and Albania and is one of the largest banks in Greece, operating from nearly 500 branches in 2018.

Strategy

The Company’s overall strategy is to provide a range of banking services to its UK and international customers, supporting their businesses, whilst protecting their wealth. The Company achieves these aims principally through the provision of:

- Secured loans for property investment and development purposes
- Deposit and transactional accounts for retail and corporate customers
- Execution only services for private banking clients in securities and mutual funds, plus associated custody services

The Company’s income is primarily derived from interest and fees earned on its lending and securities portfolio plus fees and commissions from securities and mutual fund transactions executed for customers.

The majority of the Company’s depositors and private banking customers are based in Greece, whilst the loan portfolio is predominantly formed of loans secured against property located in the London area. Our customers are typically high net worth individuals and our borrowers experienced in property investment.

The Company is fully funded via customer deposits, share capital and retained reserves and, other than a £10m subordinated loan (2017: £10m), does not rely upon any funding from wholesale counterparties or the Parent Group.

The range of products or customer base is not expected to change materially in the near future.

Business Review

The Company achieved a pre-tax profit for the year of £3.6m, compared to £14.9m in the prior year. The prior year included a one-off profit of £13m realised from the sale of the Company’s freehold office in Cannon Street. If this and other one-off items are excluded, the adjusted profit before tax for the prior year was £1.4m. This increase in profit is primarily driven by an increase in lending and higher yields on the Company’s investment securities following increases in the underlying benchmark rates.

Total assets increased to £845m from £814m, driven by an increase in corporate deposits. The Company’s net equity fell from £59.5m to £50.5m reflecting the 2018 profit and the payment of dividends totalling £11m (2017: £2.5m) and fair value loss on investment securities of £1m (2017: £6k) during the year. The payment of increased dividends was in line with the one-off profit made last year following the sale of the Company’s freehold premises. The Company’s capital base for regulatory capital purposes also includes a £10m subordinated loan from the Parent and totals £60.4m (2017: £69.4m) (Note 32.6). The capital base was higher than the minimum regulatory requirements throughout the year and it is the intention of the Company to maintain surplus capital resources in the future. Customer loans increased during the year from £243m to £289m, an increase of 19%. Opportunities for high quality, secured lending continue to be sourced and the Company only has two impaired loans within its portfolio, compared to one in the prior year. The very low level of impairments is testament to the rigorous process adopted when offering loans and the ongoing monitoring of our portfolio. The Company undertakes regular stress testing on the loan portfolio and these suggest that no material impact is likely to the Company’s capital position except in the event of a very significant downturn in the property market.

The Company maintains a significant portion of its assets in a high quality debt securities portfolio. At the end of the year, the portfolio had increased in size to a total of £407m, from a total of £396m at the prior year. The portfolio includes floating rate notes issued by highly rated international development banks, governments and financial institutions.

Net interest income for the year was £10m, an increase of 28% over the prior year comparable of £7.8m. The increased gross interest income was £13.7m compared to £10.2m, an increase of 34%, reflecting the increasing size of the loan book. Similarly, interest expense for the year rose to £3.7m, a 53% increase over £2.4m for the prior year. Overall, the net interest margin for the year increased slightly from 0.87% to 1.13%.

Fees and commissions income for the year fell from £2.4m to £2.2m. The decrease was due to a reduction in the volume of mutual fund and securities transactions as a result of the volatility in the global markets.

STRATEGIC REPORT (continued)

During the year the Company incurred total operating costs of £8.8m, compared to £8.6m in 2017, a slight increase of 2%. An increase in staff costs is offset by a decrease in general administrative expense. The headcount has been increased to support increasing business volumes and to further strengthen the Company's control functions.

Corporate Governance and Risk Management

Risk and capital management strategy is set by the Board of Directors and the overall risk governance framework is implemented through a number of committees. The most senior committees include the Audit, Risk and Compliance Committee, Executive Committee, Management Committee and Credit Risk Committee. In addition, other committees regularly convene to oversee particular aspects of risk within the business.

Key Performance Indicators

The Company's Board of Directors and management monitor the overall performance of the business using a number of Key Performance Indicators (KPIs) and a range of other metrics. In the longer term we aim to generate sustainable returns for our Parent. The most important KPIs are:

- Year to date profit before tax and
- Total equity (capital and reserves).

Profit before tax for the year was £3.6m (2017: £14.9m) whilst total equity at the period end was £50.5m (2017: £59.5m).

Year to date profit before tax is the primary measure of the Company's current performance against budgeted expectations. The total equity measures the longer-term returns generated and demonstrates the Company's underlying strength and resilience. It is a key factor in determining the Company's ability to make loans to customers, which ultimately, is our core business. The Board of Directors approves a budget and longer-term strategic plan every year.

Principal Risks and Uncertainties Facing the Company

The Board of Directors regularly assesses the principal risks and uncertainties faced by the Company.

The most significant risks the Company has faced during the year are:

Brexit

- In June 2016 the United Kingdom voted to leave the European Union (EU). During early 2017, the formal process to leave the European Union was triggered and the UK government has been negotiating with the EU since this date. A "No Deal Brexit" remains a possibility and may potentially raise issues for the Company, including market disruption and cross border business restrictions.
- Regulatory restrictions on provision of cross-border financial services provisions. Management has sought and obtained legal advice regarding any potential regulatory restrictions in maintaining its Greek customer deposit base, including acquiring new customers. In addition management also obtained legal advice regarding the investment services the Bank provides to Greek residents. The conclusion from both UK and Greek law perspective is that the Bank would be able to continue to provide banking and investment services to Greek residents under its current business model in the case of a "No Deal Brexit". The Company is actively monitoring developments.
- Withdrawal of deposits as a result of Brexit (with or without a deal). There has always been a potential risk of depositor outflow following the Brexit decision. Management's assessment is that a significant run-off is very unlikely to occur. Based on the feedback received from customers there has been surprisingly very little concern shown with regard to a "No Deal Brexit". Management pays particular attention to maintaining high levels of liquidity and regularly assesses its liquidity capacity through daily monitoring of its Liquid Cover Ratio, quarterly calculations of Company's survival period, and annual internal liquidity adequacy assessment (ILAAP) exercises.

Other risks

- The political situation in Greece and the ongoing problems in the Greek banking sector. Whilst these issues are not directly linked to the lending and assets of the Company, there is a risk of contagion if Alpha Bank AE were to encounter significant issues. This is discussed further in the section below ("Business Conditions in Greece"). Risks associated with the Company's financial instruments include interest rate risk, valuation risk, foreign exchange risk and liquidity risk. Further information on risks is set out in detail in note 32.

STRATEGIC REPORT (continued)

- The Company's exposure to the UK property market. The Company's exposure and risk of loss is intrinsically linked to the value of the underlying property collateral. The risk is mitigated by following a conservative lending model, whereby the average loan to value is circa 40%. Impairment losses to date have been at very low levels, both in absolute terms and also compared to our peers.

In addition the Company faces a range of other risks which are regularly monitored by the Audit, Risk and Compliance Committee of the Board and also the Executive Committee. These include:

- **Operational risk**
This is the risk of an event resulting from inadequate or failed internal processes or systems or external events. Such an event may have a financial impact upon the Company. Operational risks are identified, assessed and monitored by the Operational Risk Committee and recorded in the operational risk register, which is reviewed regularly by Management and by the Audit, Risk and Compliance Committee of the Board. The Company recognises that operational risk is inherent in all its activities and seeks to mitigate these risks to an acceptable level in a cost-effective way. There were no significant operational risk events during the year.
- **Regulatory risk**
The Company is subject to extensive regulation and provides regular reporting to the relevant UK and European financial regulatory bodies. Changes in regulations could require the Company to raise additional capital or liquidity, or to invest in new reporting systems. Failure to comply with the required regulatory standards might result in enforcement action against the Company, resulting in increased costs to the business and / or fines. Regulatory risk is managed by ensuring the impact of all regulatory changes is examined in advance of them coming into force as well as participation in numerous industry bodies and forums, where these issues are discussed.
- **Business conduct risk**
Failure to conduct business in accordance with regulations and our own internal standards may lead to litigation, complaints and other claims against the Company. This risk is managed through extensive and regular internal training of staff, our commitment to client service and the embedding of the 'Treating Customers Fairly' principles of the Financial Conduct Authority (FCA).
- **Competition and reputational risk**
The Company operates in a competitive business environment and there is a risk that existing clients will transfer their custom to another organisation due to a range of factors which might include poor service, uncompetitive pricing, poorly designed products and a poor market reputation. This risk is managed by ensuring that all staff are adequately trained for their roles to ensure a high quality service is delivered as standard.
- **Business environment in Greece**
The Greek economy continued to grow in 2018 following the falls in economic activity in the years up to 2015 and the zero growth in GDP experienced in 2016 with growth in GDP forecast by the OECD at 2.1% for 2018. The recovery is mainly driven by net exports of goods and services and the rebound of private consumption supported by employment gains. Insufficient financing remains a large constraint on capital spending and progress has been slow in attracting new foreign direct investment and in privatising state-owned assets. Bank lending to the more dynamic sectors, such as tourism and trade, has stabilised, but overall lending is still declining. Deposits are gradually returning as capital controls are eased. In May 2018, the European Central Bank (ECB), released the stress test results for four Greek banks, including Alpha Bank A.E. The banks passed the capitalisation test under the baseline scenario, but performed less well under the adverse scenario. The outcome of the stress test carried out demonstrated increasing optimism of the recovery of the country's banking sector. Greece successfully concluded its third economic programme in August 2018 albeit Greek bond yields remain elevated.
- **Impact of the business environment in Greece on Alpha Bank AE**
The Parent remains under close supervision by the ECB and the Bank of Greece (being components of the Single Supervisory Mechanism, 'SSM') and continues to reduce its exposures both in Greece and overseas.

Alpha Bank Group continued to improve its Statement of Financial Position and overall financial position throughout 2018. The Parent's reliance upon ELA (Emergency Liquidity Assistance) stood at €0.3bn in December 2018 down from €7bn in Q4 2017.

The Company is not under the direct oversight of the SSM. However, the Board of Directors and management are cognisant of the restrictions placed on the Parent by the SSM and take these into account as part of their management of the Company.

STRATEGIC REPORT (continued)

Future Developments and Going Concern

The Board of Directors considers the Company's updated one year budget and five year business plan on an annual basis. A five year timeframe for the plan is considered the maximum that could reasonably be forecast when considering the Company's evolving business and economic environment.

The Company's principal business line will continue to be the provision of secured loans to fund investments in property. This market has become more competitive in the last few years as new lenders have entered this space. The Company will continue to lend in a prudent manner and is confident that sufficient deals can be sourced at acceptable rates.

The Company's capital and liquidity positions are both very strong. The Company holds capital resources well in excess of the minimum levels required by regulators and compares favourably with peer banks. In addition, the Company expects to continue to be almost entirely funded by customer deposits, capital and reserves. There is no expectation of reliance upon wholesale funding sources, other than the existing £10m subordinated loan from the Parent.

The directors have assessed all relevant financial risks and, after making suitable enquiries, the directors have a reasonable expectation that the Company will continue to operate and meet its liabilities as they fall due over the following 12 months.

Approved by the Board of Directors and Signed on their behalf.

DIRECTORS' REPORT

The directors present their report together with the audited financial statements of Alpha Bank London Limited (the "Company") for the year ended 31 December 2018.

Status of the Company

The Company is authorised to accept deposits under the Financial Services and Markets Act 2000 and is registered as a limited company under the provisions of the Companies Act 2006. It is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and Prudential Regulation Authority.

Principal Activities

The Company provides a range of domestic and international banking services, as detailed in the Strategic Report.

Strategic Report

As permitted by the Companies Act, information required to be disclosed in the Director's report on the review of the business of the Company, a description of the principal risks and uncertainties facing the Company and future developments has been included in the Directors report by way of a cross reference to the strategic report on pages 5 to 8.

Results and Dividends

Profit on ordinary activities after taxation amounted to £3m (2017: £12m).

No final dividend has been approved (2017: £3m). An interim dividend of £8m was paid during the year (2017: Nil).

Directors and their interests

The following persons served as directors of the Company during the financial year and to the date of this report. None of the directors had any interests in the share capital of the Company.

Mark E. Austen
Ioannis M. Emiris
Spyros N. Filaretos
W. Lindsay Mackay
Richard S. Price
Martin J. Waghorn
George Michalopoulos
Christopher J. Sheridan (resigned 31 May 2018)

The current composition of the Board of Directors is shown on page 3.

None of the directors had a material interest at any time during the year in any contract of significance in relation to the Company's business.

All directors benefited from qualifying third party indemnity provisions in place during the financial year and at the date of this report.

Board Committees

There are three committees of the Board, the current composition of which is shown on page 3.

Executive Committee

The Executive Committee meets formally on a monthly basis to consider all aspects of the Company's operations, including formulating the Company's strategy, conducting a high level review of any HR, risk and compliance issues, and discussing the financial information of the Company. The Committee also authorises items of expenditure up to an agreed amount.

Audit, Risk & Compliance Committee

The Audit, Risk & Compliance Committee meets at least four times a year to consider the nature and scope of audit reviews, the effectiveness of the systems of internal control, compliance within the Company and its subsidiaries, and risk management. Its terms of reference also include the review of the annual financial statements and accounting policies of the Company and its subsidiaries. The external auditor meets with the Committee by invitation.

DIRECTORS' REPORT (continued)

Remuneration Committee

The Remuneration Committee reviews the appropriateness of all aspects of the Company's pay and benefit policies, taking into account the remuneration packages of comparable financial organisations and having access to relevant remuneration surveys. The Committee is able to take external advice where it feels this is necessary.

Donations

Charitable contributions made during the year amounted to £1,711 (2017: £1,716). No political donations were made (2017: £nil).

Future Developments and Going Concern

The directors have performed an assessment of the going concern of the Company. Further detail is included within the Strategic Report and the Accounting Principles in the financial statements.

Capital Structure

Details of the Company's capital structure are detailed in Note 30.

Disclosure of Information to the Auditors

The directors who held office at the date of approval of this directors' report confirm that, so far as they are each aware, there is no relevant audit information of which the Company's auditor is unaware; and each director has taken all the steps that he ought to have taken as a director to make himself aware of any relevant audit information and to establish that the Company's auditor is aware of that information.

This confirmation is given and should be interpreted in accordance with the provisions of Section 418 of the Companies Act 2006.

Auditor

In accordance with Section 489 of the Companies Act 2006, a resolution for the reappointment of Deloitte LLP as auditor of the Company is to be proposed at the forthcoming Annual General Meeting.

Company registration number: 185070

By Order of the Board

DIRECTORS' RESPONSIBILITIES STATEMENT IN RESPECT OF THE STRATEGIC REPORT, THE DIRECTORS' REPORT AND THE FINANCIAL STATEMENTS

The directors are responsible for preparing the Strategic Report, the Directors' Report and the financial statements in accordance with applicable law and regulation.

Company law requires the directors to prepare financial statements for each financial year. Under that law they have elected to prepare the financial statements in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union ("EU") and applicable law.

Under company law the directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the Company and of the profit or loss of the Company for that period.

In preparing the financial statements, IAS 1 requires that directors:

- properly select and apply accounting policies;
- present information, including account policies, in a manner that provides relevant, reliable, comparable and understandable information;
- provide additional disclosures when compliance with the specific requirements in IFRSs are insufficient to enable users to understand the impact or particular transactions, other events and conditions on the entity's financial position and performance;
- make an assessment of the Company's ability to continue as a going concern.

The directors are responsible for keeping adequate accounting records that are sufficient to show and explain the Company's transactions and disclose with reasonable accuracy at any time the financial position of the Company and enable them to ensure that the financial statements comply with the Companies Act 2006. They have a general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the Company and to prevent and detect fraud and other irregularities.

On behalf of the Board

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

Report on the audit of the financial statements

Opinion

In our opinion the financial statements of Alpha Bank London Limited (the 'company'):

- give a true and fair view of the state of the company's affairs as at 31 December 2018 and of its profit for the year then ended;
- have been properly prepared in accordance with International Financial Reporting Standards (IFRSs) as adopted by the European Union; and
- have been prepared in accordance with the requirements of the Companies Act 2006.

We have audited the financial statements which comprise:

- the income statement;
- the statement of comprehensive income;
- the balance sheet;
- the statement of changes in equity;
- the cash flow statement; and
- the related notes 1 to 37.

The financial reporting framework that has been applied in their preparation is applicable law and IFRSs as adopted by the European Union.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) and applicable law. Our responsibilities under those standards are further described in the auditor's responsibilities for the audit of the financial statements section of our report.

We are independent of the company in accordance with the ethical requirements that are relevant to our audit of the financial statements in the UK, including the Financial Reporting Council's (the 'FRC's') Ethical Standard as applied to public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We confirm that the non-audit services prohibited by the FRC's Ethical Standard were not provided to the company.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Summary of our audit approach

Key audit matters	The key audit matter that we identified in the current year was: <ul style="list-style-type: none"> • IFRS 9 Loan loss provisioning
Materiality	The materiality that we used in the current year was £618,000 which was determined on the basis of 1% of equity.
Scoping	Audit work to respond to the risks of material misstatement was performed directly by the audit engagement team.
Significant changes in our approach	We have identified a new key audit matter in the current year in response to changes in accounting standards and regulatory environment. The matter in relation to the recognition of historic trail fees was resolved in the prior year and therefore is not a key audit matter in the current year.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

Conclusions relating to going concern

We are required by ISAs (UK) to report in respect of the following matters where: the directors' use of the going concern basis of accounting in preparation of the financial statements is not appropriate; or

- the directors have not disclosed in the financial statements any identified material uncertainties that may cast significant doubt about the company's ability to continue to adopt the going concern basis of accounting for a period of at least twelve months from the date when the financial statements are authorised for issue.

We have nothing to report in respect of these matters.

Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the financial statements of the current period and include the most significant assessed risks of material misstatement (whether or not due to fraud) that we identified. These matters included those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team.

This matter was addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on this matter.

IFRS 9 Loan loss provisioning

Key audit matter description

The company holds an IFRS 9 impairment provision of £508,000 against gross loans and advances to customers of £290m.

From 1 January 2018, the company has implemented IFRS 9, which has resulted in the company applying an expected credit loss ('ECL') model to determine the provision for impairment losses against loans and advances to customers. In particular, for financial assets held at amortised cost, IFRS 9 requires the carrying value of the asset to be assessed for impairment using unbiased forward-looking information. The measurement of ECL is complex and involves a number of judgments and estimation of assumptions relating to exposure at default, likely loss given default, assessing significant increases in credit risk and future economic scenario modelling. They are also affected by management's consideration of the future economic environment.

There is a high degree of inherent judgement involved in the IFRS loan loss provisioning approach and as such, management is required to make significant judgments on the assessment of provisions for impairment losses.

Based on our risk assessment, we focussed our procedures on management's timely identification of any deterioration in credit risk as this impacts the staging and the level of provisions.

Given the significant level of management judgement involved, we have determined that there is the potential for fraud through the manipulation of the balance.

Further detail in respect of management judgments and assumptions is set out within notes 5 and 32 to the financial statements.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

<p>How the scope of our audit responded to the key audit matter</p> 	<p>In order to address the key audit matter in respect of the valuation risk for loan loss provisions identified, we performed the following procedures:</p> <ul style="list-style-type: none"> - reviewed the design and implementation of controls relating to the credit risk assessment process; and - tested a sample of development loans, loans due to mature within 12 months of the balance sheet date and interest only loans included within Stage 1, to identify whether there were any indicators of an increase in credit risk such that these should have been categorised within Stage 2 or Stage 3 and therefore had a higher provision.
<p>Key observations</p> 	<p>From the work performed we concur with management's loan loss provision as at 31 December 2018.</p>

Our application of materiality

We define materiality as the magnitude of misstatement in the financial statements that makes it probable that the economic decisions of a reasonably knowledgeable person would be changed or influenced. We use materiality both in planning the scope of our audit work and in evaluating the results of our work.

Based on our professional judgement, we determined materiality for the financial statements as a whole as follows:

<p>Materiality</p>	<p>£618,000 (2017: £270,000)</p>
<p>Basis for determining materiality</p>	<p>1% of equity (2017: 0.5% of equity)</p>
<p>Rationale for the benchmark applied</p>	<p>We considered equity to be the most appropriate benchmark given its stability compared to other profit measures. The equity basis of materiality during the year is a consistent benchmark to the prior year audit. However, we increased the percentage applied from 0.5% to 1%.</p>

We agreed with the Audit Committee that we would report to the Committee all audit differences in excess of £0.031m (2017: £0.014m), as well as differences below that threshold that, in our view, warranted reporting on qualitative grounds. We also report to the Audit Committee on disclosure matters that we identified when assessing the overall presentation of the financial statements.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

An overview of the scope of our audit

Our audit was scoped by obtaining an understanding of the entity and its environment, including internal control, and assessing the risks of material misstatement. Audit work to respond to the risks of material misstatement was performed directly by the audit engagement team. We performed our scoping on the basis of whether quantitatively or qualitatively.

Other information

The directors are responsible for the other information. The other information comprises the information included in the annual report other than the financial statements and our auditor's report thereon.

We have nothing to report in respect of these matters.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated.

If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

Responsibilities of directors

As explained more fully in the directors' responsibilities statement, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the company's ability to continue as a going concern, disclosing as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Details of the extent to which the audit was considered capable of detecting irregularities, including fraud are set out below.

A further description of our responsibilities for the audit of the financial statements is located on the FRC's website at: www.frc.org.uk/auditorsresponsibilities. This description forms part of our auditor's report.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

Extent to which the audit was considered capable of detecting irregularities, including fraud

We identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and then design and perform audit procedures responsive to those risks, including obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion.

Identifying and assessing potential risks related to irregularities

In identifying and assessing risks of material misstatement in respect of irregularities, including fraud and non-compliance with laws and regulations, our procedures included the following:

- enquiring of management internal audit and the audit committee, including obtaining and reviewing supporting documentation, concerning the company's policies and procedures relating to:
 - identifying, evaluating and complying with laws and regulations and whether they were aware of any instances of non-compliance;
 - detecting and responding to the risks of fraud and whether they have knowledge of any actual, suspected or alleged fraud;
 - the internal controls established to mitigate risks related to fraud or non-compliance with laws and regulations;
- discussing among the engagement team regarding how and where fraud might occur in the financial statements and any potential indicators of fraud. As part of this discussion, we identified potential for fraud in the following areas: recognition of trail fee income commission, IFRS 9 loan loss provisioning and management override of controls; and
- obtaining an understanding of the legal and regulatory frameworks that the company operates in, focusing on those laws and regulations that had a direct effect on the financial statements or that had a fundamental effect on the operations of the company. The key laws and regulations we considered in this context included relevant provisions of the UK Companies Act and tax legislation. We also considered those laws and regulations that had fundamental effect on the operations of the Group, such as the relevant provisions of the Prudential Regulation Authority ('PRA') and Financial Conduct Authority ('FCA') regulation.

Audit response to risks identified

As a result of performing the above, we identified IFRS 9 loan loss provisioning against loans and advances to customers as a key audit matter. The key audit matters section of our report explains the matter in more detail and also describes the specific procedures we performed in response to that key audit matter.

In addition to the above, our procedures to respond to risks identified included the following:

- reviewing the financial statement disclosures and testing to supporting documentation to assess compliance with relevant laws and regulations discussed above as having a direct effect on the financial statements;
- enquiring of management, the audit committee and the compliance department concerning actual and potential litigation and claims;
- performing analytical procedures to identify any unusual or unexpected relationships that may indicate risks of material misstatement due to fraud;
- reading minutes of meetings of those charged with governance, reviewing internal audit reports and reviewing correspondence with PRA, FCA and HMRC; and
- in response to the risk of fraud in the recognition of trail fee income commission, making enquiries of management regarding management's model for estimating fee income and substantively testing expected fee income by performing tests in relation to calculations of fee income and cash received during 2018.
- in addressing the risk of fraud through management override of controls, testing the appropriateness of journal entries and other adjustments; assessing whether the judgements made in making accounting estimates are indicative of a potential bias; and evaluating the business rationale of any significant transactions that are unusual or outside the normal course of business.

We also communicated relevant identified laws and regulations and potential fraud risks to all engagement team members including internal specialists and remained alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

Report on other legal and regulatory requirements

Opinions on other matters prescribed by the Companies Act 2006

In our opinion, based on the work undertaken in the course of the audit:

- the information given in the strategic report and the directors' report for the financial year for which the financial statements are prepared is consistent with the financial statements; and
- the strategic report and the directors' report have been prepared in accordance with applicable legal requirements.

In the light of the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified any material misstatements in the strategic report or the directors' report.

Matters on which we are required to report by exception

Adequacy of explanations received and accounting records

Under the Companies Act 2006 we are required to report to you if, in our opinion:

- we have not received all the information and explanations we require for our audit; or
- adequate accounting records have not been kept, or returns adequate for our audit have not been received from branches not visited by us; or
- the financial statements are not in agreement with the accounting records and returns.

We have nothing to report in respect of these matters.

Directors' remuneration

Under the Companies Act 2006 we are also required to report if in our opinion certain disclosures of directors' remuneration have not been made.

We have nothing to report in respect of this matter.

INDEPENDENT AUDITOR'S REPORT TO THE MEMBERS OF ALPHA BANK LONDON LIMITED

Other matters

Auditor tenure

Following the recommendation of the audit committee, we were appointed by those charged with governance on 19 May 2017 to audit the financial statements for the year ending 31 December 2017 and subsequent financial periods. The period of total uninterrupted engagement including previous renewals and reappointments of the firm is two years, covering the years ending 31 December 2017 to 31 December 2018.

Consistency of the audit report with the additional report to the audit committee

Our audit opinion is consistent with the additional report to the audit committee we are required to provide in accordance with ISAs (UK).

Use of our report

This report is made solely to the company's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's members as a body, for our audit work, for this report, or for the opinions we have formed.

NOTES TO THE FINANCIAL STATEMENTS

1. General information

Alpha Bank London Limited (hereafter the “Company” or “ABL”) is a company limited by shares incorporated and registered in the United Kingdom. The address of the Company’s registered office is shown on page 3.

The principal activities of the Company are set out in the Strategic Report.

2. Adoption of new and revised IFRS Standards

2.1 Impact of initial application of IFRS 9 Financial Instruments

This year, the Company has applied IFRS 9 Financial Instruments (as revised in July 2014) and the related consequential amendments to other IFRS Standards that are effective for an annual period that begins on or after 1 January 2018. Comparative information for the accounting periods prior to adoption has not been restated, as permitted by IFRS 9.

The Company established an IFRS 9 implementation programme in 2016 which was jointly owned by Risk and Finance with formal governance reporting to the IFRS 9 Steering Committee initially and then to the Credit Risk Committee. Progress was regularly reported to the Audit, Risk and Compliance Committee. Further information on the policies relating to and our approach to IFRS 9 can be found in Note 4.

IFRS 9 introduced new requirements for:

- i. The classification and measurement of financial assets and financial liabilities – requiring asset classification and measurement based upon both business model and product characteristics.
- ii. Impairment of financial instruments – introducing an expected credit loss model using forward looking information which replaces an incurred loss model.
- iii. General hedge accounting – introducing changes to the hedging of financial instruments.

Details of the impact on the Company’s financial statements are described below.

(a) Classification and measurement of financial assets

The date of initial application (i.e. the date on which the Company has assessed its existing financial assets and financial liabilities in terms of the requirements of IFRS 9) is 1 January 2018. IFRS 9 requires the classification of financial assets to be determined by a contractual cash flows test referred to as solely payment of principal and interest (“SPPI”) and a business model test. All recognised financial assets that are within the scope of IFRS 9 are classified as held at amortised cost, at fair value through other comprehensive income (“FVTOCI”), or at fair value through profit or loss (“FVTPL”).

Assessment of existing financial assets as at 1 January 2018

The directors of the Company reviewed and assessed the Company’s existing financial assets as at 1 January 2018 based on the facts and circumstances that existed at that date and concluded that the initial application of IFRS 9 has had the following impact on the Company’s financial assets with regards to their classification and measurement:

- The Company’s investments in corporate and government bonds that were classified as available-for-sale (“AFS”) financial assets under IAS 39 have been classified as financial assets at FVTOCI because they are held within a business model whose objective is both to collect contractual cash flows and to sell the bonds, and they have contractual cash flows that are SPPI. The change in the fair value on these bonds continues to accumulate in the FVTOCI revaluation reserve until they are derecognised or reclassified.
- The Company’s derivatives, principally forward foreign exchange contracts, continue to be classified as FVTPL.
- The Company’s loans and advances that were measured at amortised cost financial assets under IAS 39 continue to be measured at amortised cost because they are held within a business model to collect contractual cash flows which are SPPI.

(b) Impairment of financial instruments

In relation to the impairment of financial instruments, IFRS 9 requires an expected credit loss model to be used as opposed to an incurred credit loss model under IAS 39. The expected credit loss model requires the Company to account for expected credit losses and changes in those expected credit losses at each reporting date to reflect changes in credit risk since initial recognition of the financial assets. In order to measure an allowance for expected credit losses, a financial instrument must first be classified into stages based on its credit risk.

NOTES TO THE FINANCIAL STATEMENTS (continued)

2.1 Impact of initial application of IFRS 9 Financial Instruments (continued)

The classification into stages is performed as follows:

Stage 1 - includes performing credit exposures that have no significant increase in credit risk ("SICR") since the initial recognition date. The expected credit losses calculated are the twelve month losses from the date of the financial statements.

Stage 2 - includes credit exposures with SICR since the initial recognition date but which are not non-performing. The expected credit losses calculated are the lifetime losses.

Stage 3 - includes non-performing/default exposures. The expected credit losses calculated are the lifetime losses. See note 4.14 for more details.

Assessment of existing financial instruments as at 1 January 2018

The directors of the Company reviewed and assessed whether there has been a significant increase in credit risk since initial recognition of the Company's existing financial instruments as at 1 January 2018 based on the facts and circumstances that existed at that date, and on this basis measured a loss allowance for expected credit losses, and concluded that the initial application of IFRS 9 has had minimal impact on the Company's financial assets with regards to their impairment and is outlined as follows:

- The Company's loans and advances to banks have experienced no significant changes in credit quality compared to the initial recognition, and have been classified as Stage 1 financial instruments. The allowance for expected credit losses continues to be nil.
- Of the Company's loans and advances to customers, one loan classified as non-performing under IAS 39 has been classified as a Stage 3 financial instrument. All other credit exposures have been classified as stage 1. The changes in the allowances for expected credit losses calculated on an individual basis and on a collective basis are presented in the adjusted Statement of Financial Position on page 20.
- The Company's debt instruments have experienced no significant change in credit quality compared to the initial recognition, and have been classified as Stage 1 financial instruments. The change in the allowance for expected credit losses is presented in the adjusted Statement of Financial Position on page 20.
- The Company's loan commitments have experienced no significant changes in credit quality compared to the initial recognition, and have been classified as Stage 1 financial instruments. The allowance for expected credit losses continues to be nil.

(c) Classification and measurement of financial liabilities

Financial liabilities are classified as either designated as measured at FVTPL or as other financial liabilities.

Assessment of existing financial liabilities as at 1 January 2018

The directors of the Company reviewed and assessed the Company's existing financial liabilities as at 1 January 2018 based on the facts and circumstances that existed at that date and concluded that the initial application of IFRS 9 has no impact on the Company's financial liabilities with regards to their classification and measurement. The Company's only existing financial liabilities designated as measured at FVTPL are derivatives, principally forward foreign exchange contracts, and there has been no change in the credit risk of the issuer. Therefore they continue to be designated as measured at FVTPL with the whole change in the fair value of the financial liability being presented in profit or loss.

(d) General hedge accounting

The general hedge accounting requirements under IFRS 9 retain the three types of hedge accounting; fair value hedges, cash flow hedges and hedges of the net investment in a foreign operation. However greater flexibility has been introduced to the types of transactions eligible for hedge accounting. In addition, the effectiveness test has been replaced with the principle of an 'economic relationship'. Retrospective assessment of hedge effectiveness is no longer required.

Assessment of existing hedges as at 1 January 2018

As the Company has no designated hedges as at 1 January 2018, the new requirements under IFRS 9 did not impact the Company.

NOTES TO THE FINANCIAL STATEMENTS (continued)

2.1 Impact of initial application of IFRS 9 Financial Instruments (continued)

(e) Disclosures in relation to the initial application of IFRS 9

Statement of Financial Position adjustments

The Statement of Financial Position has been adjusted as follows with the adoption of IFRS 9 as at 1 January 2018:

	Note	Classification - IAS 39 category	Classification- IFRS 9 category	As at 31 Dec 2017 £'000	Impairment £'000	IFRS 9 carrying amount as at 1 Jan 2018 £'000
Assets						
Cash and balances at central banks		Amortised cost	Amortised cost	134	-	134
Due from banks		Amortised cost	Amortised cost	169,872	-	169,872
Derivative financial assets		FVTPL	FVTPL	422	-	422
Investment securities	1	AFS	FVTOCI	396,434	-	396,434
Loans and advances to customers	2	Amortised cost	Amortised cost	243,327	(9)	243,318
Total assets				810,189	(9)	810,180
Liabilities						
Derivative financial liabilities		FVTPL	FVTPL	516	-	516
Total liabilities				516	-	516
Equity						
Retained earnings				28,929	(77)	28,852
Fair value reserve				572	68	640
Total equity				29,501	(9)	29,492
Total liabilities and equity				30,017	(9)	30,008
Undrawn commitments				56,733	(1)	56,732
Total off-balance sheet				56,733	(1)	56,732

Notes:

- The allowance for expected credit losses on investment securities measured at FVTOCI (£68k) is recognised against fair value reserve and not against the carrying amount of investment securities, as they are already measured at fair value.
- The reduction in the carrying amount of loans and advances measured at amortised cost (£9k) is the difference between the IFRS 9 allowance for expected credit losses and the IAS 39 loan provision.

NOTES TO THE FINANCIAL STATEMENTS (continued)

2.2 Impact of initial application of IFRS 15 Revenue from Contracts with Customers

The Company has adopted IFRS 15 for annual reporting period beginning on 1 January 2018. The standard applies to all contracts with customers except lease contracts, insurance contracts, financial instruments and certain non-monetary exchanges between entities in the same line of business to facilitate sales to customers or potential customers.

IFRS 15 supersedes the following Standards:

- IAS 11 "*Construction Contracts*"
- IAS 18 "*Revenue*"
- IFRIC 13 "*Customer Loyalty Programmes*"
- IFRIC 15 "*Agreements for the Construction of Real Estate*"
- IFRIC 18 "*Transfers of Assets from Customers*"; and
- SIC 31 "*Revenue – Barter Transactions involving Advertising Services*"

IFRS 15 provides a principle based approach for revenue recognition and introduces the concept of recognising revenue for obligations as they are satisfied. The core principle is that an entity should recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.

The application of the core principle in IFRS 15 is carried out in five steps:

- Step 1: Identifying the contract
- Step 2: Identifying separate performance obligations
- Step 3: Determining the transaction price
- Step 4: Allocating transaction price to performance obligations
- Step 5: Satisfaction of performance obligation

The performance obligation notion is new and in effect represents a promise in a contract with a customer to transfer to the customer either: a) a goods or service (or a bundle of goods or service) that is distinct; or (b) a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customers. Judgements and estimates are made in the application of IFRS 15 to determine the timing of satisfaction of performance obligations and the amounts allocated to performance obligations.

Under IFRS 15, revenue is recognised when the identified performance obligation is satisfied by transferring a promised service to the customer. The service is considered to be transferred when the customer obtains control. The transfer of control to the customer represents the transfer of the rights with regards to the service. The customer's ability to receive the benefit from the service is represented by its right to substantially all of the cash inflows, or the reduction of the cash outflows, generated by the services.

Frequently, the promised service to the customers is transferred over time (IFRS15.35). If an entity is unable to demonstrate that control transfers over time, the presumption is that control transfers at a point in time.

Having considered all material sources of revenue, the Company has assessed its non-interest revenue streams, predominantly consisting of custodian fees earned on client investments, and determined that the Company's existing accounting policy was consistent with the requirements of IFRS 15 and the implementation of IFRS 15 has had no significant impact on the recognition of income.

The Company has adopted IFRS 15 using the cumulative effect method with the effect of initially applying this standard recognised at the date of initial application (i.e. 1 January 2018). As permitted by the transition options under IFRS 15, comparative figures for the prior year have not been restated.

Accounting Principles Applied

3. New and revised IFRS Standards in issue but not yet effective

3.1 Newly adopted Standards

In addition to IFRS 9 and IFRS 15 as detailed in Note 2, the following accounting Standards became effective for accounting periods beginning on or after 1 January 2018 and are applicable to the Company. The Company's accounting policies are already consistent with the new requirements.

NOTES TO THE FINANCIAL STATEMENTS (continued)

3.1 Newly adopted Standards (continued)

IFRIC 22 Foreign Currency Transactions and Advance Consideration

This interpretation sets out requirements regarding which exchange rate to use in reporting foreign currency transactions (such as revenue transactions) when payment is made or received in advance.

3.2 Accounting Standards to be adopted in the future

The following pronouncements are not applicable for the year ending 31 December 2018 and have not been applied in preparing these financial statements. The impact of these accounting changes is still being assessed by the Company and reliable estimates cannot be made at this stage.

IFRS 16 Leases

Endorsed by the EU in October 2017, IFRS 16 will supersede the current lease guidance including IAS 17 *Leases* and the related interpretations when it becomes effective for accounting periods beginning on or after 1 January 2019.

IFRS 16 significantly differentiates the accounting of leases for lessees while essentially maintaining the existing requirement of IAS 17 for the lessors. In particular, under the new requirements, the classification of leases as either operating or finance is eliminated. A lessee is required to recognize, for all leases with term of more than 12 months, the right-of use asset as well as the corresponding obligation to pay the lease payments. The above treatment is not required when the asset is of low value.

Furthermore, extensive disclosures are required by IFRS 16.

IFRS 16 doesn't require the recognition of any right-of-use asset or liability for further payments for this lease; instead, certain information is disclosed as operating lease commitments in Note 31. A preliminary assessment indicates that these arrangements will meet the definition of a lease under IFRS 16, and hence the Company will recognise a right-of-use asset and a corresponding liability in respect of all these leases unless they qualify for low value or short-term leases upon the application of IFRS 16. This change will mainly impact the property that the Company currently accounts for as operating leases. Management are still assessing the estimated value of the asset.

IFRS 17 Insurance Contract

IFRS 17 replaces IFRS 4 Insurance Contracts and is effective for annual periods beginning on or after 1 January 2021. Management estimates that the impact will be immaterial on the financial position and results.

Minor amendments to other accounting standards

The IASB has issued a number of minor amendments to IFRSs effective 1 January 2019. The revised requirements are not expected to have a significant impact on the Company.

- IFRIC 23 *Uncertainty over Tax Treatments*
- Amendments to IFRS 9 *Prepayment Features with Negative Compensation*
- Amendments to IAS 28 *Long-term Interests in Associates and Joint Ventures*
- Amendments to IAS 19 *Plan Amendment, Curtailment or Settlement*

4. Basis of accounting and presentation

The financial statements have been prepared in accordance with International Financial Reporting ("IFRS") Standards, as endorsed by the European Union ("EU") and in accordance with the special provisions of Part VII of the Companies Act 2006, as at and for the year ended 31 December 2018.

As a wholly-owned subsidiary of Alpha Bank A.E. ("Alpha Bank" or the "Parent"), the Company has taken advantage of the exemption in IFRS 10 "Consolidated Financial Statements" and the Companies Act 2006 and has not prepared consolidated financial statements. Further details on the parent can be found in Note 35.

They are presented in Sterling and rounded to the nearest thousand unless otherwise indicated. They are prepared on the historical cost basis, except for certain financial instruments that are measured at fair value as explained in the accounting policies below.

The principal accounting policies adopted are set out below.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.1 Going concern

The Company's objectives, policies and processes for managing its capital; its financial risk management objectives; details of its financial instruments and hedging activities; and its exposures to credit risk and liquidity risk are set out in note 32 to the financial statements.

In evaluating whether it is appropriate for the Company to prepare the financial statements on a going concern basis, various factors were considered which are discussed below.

The Company operates independently of the Parent and does not rely on the Parent's infrastructure which includes, inter alia, having its own IT and payment systems that are managed locally. It has a total capital ratio which exceeds the minimum regulatory requirement and at the year-end its lending portfolio had only two impaired loans, for which an appropriate provision was made.

The Company's loan book is currently self-funded by customer deposits and has a current loan to deposit ratio of 36.6% (2017: 32.8%), allowing the Company headroom to fund its loan book even with a drop in customer deposits. If required and subject to the liquidity position at Alpha Bank Group, the Company also has in place a £150 million committed loan facility from the Parent maturing in April 2020. This facility is currently undrawn.

The directors keep the situation in Greece, as well as the ongoing Brexit considerations in the UK, under constant review. They have also considered the possibility of further stresses on the Parent and the contagion risk to the Company, which may lead to a potential risk of a sudden considerable level of withdrawal from depositors once exchange controls (which currently restrict the ability to transfer funds out of Greece) are removed. In a worst case scenario, the Company has access to a number of management actions, including utilising overnight and short term money market deposits, selling the debt securities portfolio and selling down parts of the loan book. Given the collateralised nature of the book, a significant haircut to the loan book in the event of a sell-down is not expected. Regarding "No Deal Brexit" Management has sought and obtained legal advice regarding any potential regulatory restrictions in maintaining its Greek customer deposit base, including acquiring new customers. In addition management also obtained legal advice regarding the investment services the Bank provides to Greek residents. The conclusion from both UK and Greek law perspective is that the Bank would be able to continue to provide banking and investment services to Greek residents under its current business model in the case of a "No Deal Brexit"

In summary, the directors have assessed all financial risks which they believe affect the Company's going concern status - liquidity risk, credit risk, capital adequacy, reliance placed on the Alpha Bank Group - and have reviewed the results of stress tests. They have concluded that there is no reason to believe that a material uncertainty exists that may cast doubt upon the ability of the Company to continue as a going concern or its ability to continue with its current banking arrangements. On the basis of the above, the directors' view is that the Company will continue as a going concern and the financial statements have therefore been prepared on that basis.

4.2 Foreign currency transactions

The financial statements are presented in Sterling, which is the functional currency of the Company and the currency of the country of incorporation of the Company.

Transactions in foreign currencies are translated into Sterling at the closing exchange rates at the date of the transaction.

Monetary assets and liabilities denominated in foreign currencies at the Statement of Financial Position date are translated to sterling at the closing exchange rate at that date. Foreign exchange differences arising on translation are recognised in the Statement of Profit or Loss.

Non-monetary assets and liabilities are recognised at the exchange rate ruling at initial recognition.

4.3 Cash and cash equivalents

For the purposes of the statement of cash flows, cash and cash equivalents consist of:

- a) Cash on hand;
- b) Non-restricted placements with central banks; and
- c) Short-term balances due from banks.

Short-term balances due from banks are amounts that mature within three months after the date of the financial statements.

The impact of exchange rate fluctuations is included on the face of the Cash Flow Statement.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4 Financial instruments

4.4.1 Initial recognition

Financial assets and financial liabilities are recognised in the Company's Statement of Financial Position when the Company becomes a party to the contractual provisions of the instrument.

Financial assets and financial liabilities are initially recognised at fair value. Transactions costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than those measured at FVTPL) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities which are measured at FVTPL are recognised immediately in profit or loss.

4.4.2 Classification of financial assets

Financial assets are measured subsequently under the following three categories:

1. At amortised cost
2. At fair value through other comprehensive income (FVTOCI)
3. At fair value through profit or loss (FVTPL)

The classification of these three categories is based on:

1. The Company's business model for managing the financial assets (Step 1), and
2. The contractual cash flow characteristics of the financial assets (Step 2).

Step 1 assigns a business model based on relevant business model indicators. Step 2 addresses several categories of contractual features derived from the IFRS 9 content as representing modifications of the timing/value of contractual cash flows of the time value of money element which would trigger FVTPL measurement.

Debt instruments

A debt instrument is measured at amortised cost if both the following conditions are met:

- The asset is held within a business model whose objective is to hold assets in order to collect contractual cash flows
- The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payment of principal and interest ("SPPI") on the principal amount outstanding

The Company's due from banks balances and loans and advances to customers meet the above conditions, and are therefore measured at amortised cost.

A debt instrument is measured at FVTOCI if both of the following conditions are met:

- The asset is held within a business model in which assets are managed to achieve a particular objective by both collecting contractual cash flows and selling financial assets
- The contractual terms of the financial asset give rise on specified dates to cash flows that are SPPI on the principal amount outstanding

The Company's investment securities meet the above conditions, and are therefore measured at FVTOCI.

When a debt instrument measured at FVTOCI is derecognised, the cumulative gain or loss previously recognised in other comprehensive income is reclassified from equity to profit or loss as a reclassification adjustment.

Debt instruments measured at FVTOCI are subject to impairment.

A debt instrument that is not measured at amortised cost or at FVTOCI must be measured at FVTPL.

The Company's derivative financial instruments are measured at FVTPL.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. The Company does not hold any equity instruments.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4.2 Classification of financial assets (continued)

Derivatives

Under IFRS 9, all derivative financial instruments are deemed to be held for trading and therefore they are generally measured at FVTPL.

Holding-to-collect contractual cash flows

Financial assets that are held within a business model with the objective of holding assets in order to collect contractual cash flows are measured at amortised cost (provided the asset also meets the contractual cash flow test). Such assets are managed to realise cash flows by collecting contractual payments over the life of the instrument.

Factors that could indicate a hold to collect (“HTC”) business model include the following:

- Evaluation of the portfolio’s performance is based e.g. on the contractual return (e.g. margins) and the net interest income and credit quality of the financial asset rather than the fair value of the asset;
- Risk management mainly refers to managing the credit risk and aims at minimising potential credit losses, e.g. through restructurings or sales;
- Compensation is not linked to the fair value changes of the managed portfolio;
- The business model objective is not to realise cash flows through sales of instruments. However, sales/expected sales can be consistent with a HTC business model, i.e. it is not required to hold all of the instruments in the portfolio until maturity. This may e.g. be the case if:
 - Sales are infrequent (even if significant in value) or insignificant in value both individually and in aggregate (even if frequent);
 - Sales are linked to an increase in credit risk;
 - Sales are made close to maturity and the proceeds approximate the remaining contractual cash flows;

The Company must consider information about past sales in terms of the reasons for the sales and the conditions that existed at that time compared to current conditions. Based on these considerations, the Company needs to determine the predictive value of the past sales for the expectations of future sales.

The Company regards all of its loans and advances to customers and due from banks balances within a business model with the objective of holding to collect contractual cash flows, therefore they are all measured at amortised cost.

Holding-to-collect contractual cash flows and selling

The FVTOCI measurement category is mandatory for portfolios of financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets (provided the asset also meets the contractual cash flow test).

In this type of business model, the Company’s management has made the decision that both collecting contractual cash flows and selling are fundamental to achieving the objective of the business model. There are various objectives that may be consistent with this type of business model. For example, the objective of the business model may be to:

- Manage everyday liquidity needs
- To maintain a particular interest yield profile or
- Match the duration of financial assets to the duration of the liabilities that fund those assets.

Compared to the business model with an objective to hold financial assets to collect contractual cash flows, this business model will typically involve greater frequency and value of sales. This is because selling financial assets is integral to achieving the business model's objective rather than only incidental to it. However there is no threshold for the frequency or value of sales that can or must occur in this business model.

The Company regards all of its investment securities to be within a business model which has the objective of holding to collect contractual cash flows and selling, therefore they are all measured at FVTOCI.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4.2 Classification of financial assets (continued)

Financial assets measured at FVTPL

Financial assets are measured at FVTPL if they are not held within either a business model whose objective is to hold assets to collect contractual cash flows or within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets.

A business model that results in measurement at FVTPL is where the financial assets are held for trading. Investments made within a held for trading portfolio are those held intentionally for short-term resale or where the position is created with the intent of benefiting from actual or expected short-term price movements or to lock in arbitrage profits.

4.4.3 Reclassification of financial assets

If the business model under which the Company holds financial assets changes, the financial assets affected are reclassified.

Changes in the business model for managing financial assets are expected to be very infrequent. They must be determined by the Company's senior management as a result of external or internal changes and must be significant to the Company's operations and demonstrable to external parties. Accordingly, a change in the objective of the Company's business model will occur only when the Company either begins or ceases to carry on an activity that is significant to its operations.

The reclassification should be applied prospectively from the 'reclassification date', which is defined as, 'the first day of the first reporting period following the change in business model that results in the Bank's reclassifying financial assets'. This does not give rise to a prior period error in the Bank's financial statements (as defined in IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors). Accordingly, any previously recognised gains, losses or interest should not be restated.

4.4.4 Impairment

The Company recognises an allowance for expected credit losses on the following financial instruments that are not measured at FVTPL:

- Loans and advances to banks;
- Loans and advances to customers;
- Debt instruments;
- Loan commitments; and
- Financial guarantee contracts issued.

Loans and advances to customers are grouped into 3 main categories:

- Real Estate Loans
- Bond Syndicated Loans
- Fully secured by Cash Greek Originated Loans

In order to measure an allowance for expected credit losses, a financial instrument must first be classified into stages based on its credit risk. The classification into stages is based on the change in credit quality compared to the initial recognition. The adoption of this model aims to achieve:

- The timely recognition and measurement of credit losses prior to their realisation;
- The classification of exposures depending on the deterioration of their credit quality; and
- The more accurate measurement of expected credit losses.

The classification into stages is performed as follows:

Stage 1 - includes performing credit exposures that have no significant increase in credit risk since the initial recognition date. The expected credit losses calculated are the twelve month losses from the date of the financial statements.

Stage 2 - includes credit exposures with significant increase in credit risk since the initial recognition date but which are not non-performing. The expected credit losses calculated are the lifetime losses.

Stage 3 - includes non-performing/ default exposures. The expected credit losses calculated are the lifetime losses.

The calculation of expected credit losses is carried out either on an individual basis for all borrowers with at least one non-performing exposure, or collectively for other exposures.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4.4 Impairment (continued)

The allowance for expected credit losses is a probability-weighted estimate of the present value of credit losses. These are measured as the present value of the difference between the cash flows due to the Company under the contract and the cash flows that the Company expects to receive, discounted at the asset's effective interest rate ("EIR") or best alternative proxy like the nominal interest rate.

Allowances for expected credit losses are presented in the statement of financial position as follows:

- For financial assets measured at amortised cost: as a deduction from the gross carrying amount of the assets;
- For debt instruments measured at FVTOCI: no allowance is recognised in the statement of financial position as the carrying amount is at fair value; and
- For undrawn loan commitments: as a provision.

Past due financial assets

An exposure is past due if the counterparty's credit obligation is materially more than one day past due. The amount due is considered as the sum of the principal, interests and charges/commissions that is over one day due at the account level.

Forborne financial assets

An exposure is considered as forborne if there is a significant modification of initial contractual terms by granting more favourable terms (concession) or partial or total refinancing of current outstanding debts (refinancing) to borrowers with financial difficulty.

Financial difficulty

Financial difficulty is defined as the situation where the borrowers are unable to comply or are about to face difficulties in servicing their credit obligations as per the current loan repayment schedule due to the worsening of their financial status.

The assessment of the financial difficulty is based solely on the borrower's conditions according to objective indicators derived by the evaluation of his transactional behaviour and the financial statements and ratio analysis, disregarding any collateral or any other guarantees provided by third parties. For a more precise identification of borrowers with Financial Difficulty, below is a list with the most important indicators:

- The borrower's exposures are more than 30 days past due during the last three months prior to the forbearance (would be classified as Stage 2).
- The borrower has exposures for which credit risk has significantly deteriorated compared to the initial recognition (would be classified as Stage 2 as long as neither of the below two indicators have yet been met).
- The borrower is assessed as Unlikely to Pay ("UTP"), namely, cannot fully repay credit obligations without collateral liquidation (would be classified as Stage 3).
- All borrowers classified as defaulted or high risk (rating grade CC- and C and credit risk rating category 4 for real estate finance) are automatically assigned the "Financial Difficulty" indication flag (would be classified as Stage 3).

Regardless of the credit risk rating, any borrower may be assigned the Financial Difficulty indication flag if it is considered that they face or are about to face difficulties in meeting their credit obligations towards the Company.

Unlikely to Pay ("UTP")

An exposure is considered UTP when it is less than 90 days past due and the Company assesses that the borrower is unlikely to fully meet his credit obligations without the liquidation of collateral, regardless of the existence of any past due amount or the number of days past due, with the exception of collaterals that are part of the production and trade chain of the borrower (e.g. properties for Real Estate companies).

In determining whether or not an exposure is UTP an assessment is made in order to; determine events which when they occur, the exposure is identified as Non-Performing (Hard UTP Triggers) without any assessment needed by any Credit Committee, (b) determine triggers which when they occur, the borrower should be assessed by the Country Credit Committee to decide if the borrower's exposures should be identified as Non-Performing or not (Soft UTP Triggers). This assessment takes place at the date of revision of the borrower's credit limits based on the credit risk rating. If finally a borrower is flagged as UTP, then his credit risk rating should be D in the Bank systems or credit risk rating category 5 for Borrowers assessed using the real estate finance model. It is noted that if a borrower flagged as UTP belongs to a Group of companies, then it should also be assessed as a whole by the Credit Committee for the existence or not of UTP. An exposure defined as UTP would be classified as Stage 3.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4.4 Impairment (continued)

Non-performing financial assets

An exposure is considered as Non-Performing (when at least one of the following criteria applies at the time of the credit risk rating assessment:

- The exposure is more than 90 days past due (“NPL”)
- Legal actions have been undertaken (“NPL”)
- The exposure is classified as Forborne Non-Performing Exposure (“FNPL”)
- It is assessed as UTP

An exposure is considered as default when the criteria specified by the definition of Non-Performing Exposures are met. An exposure defined as non-performing or default would be classified as Stage 3.

Forborne non-performing financial assets

The Forborne Exposures that meet any of the following criteria should be classified as non-performing:

1. They are supported by insufficient payment plans (either initial or subsequent payment plans, depending on the case) including, among other, repeated failure to comply with the repayment plan, changes to the payment plan for preventing breaches or support of payment plan to expectations that are not supported by macroeconomic forecasts or realistic assumptions about the ability or the willingness of the borrower to repay.
2. They include contractual terms that delay the timing of regular repayment instalments in a manner that prevents the appropriate classification assessment, such as when grace periods over two years for capital repayment are granted.
3. They have been reclassified from the performing classification, including remodified exposures or exposures over 30 days past due.

Credit risk at initial recognition

The Company recognises an exposure in the Statement of Financial Position when it becomes a party to the contractual provisions of the exposure. Subsequently, the exposures are classified into stages and follow the credit risk measurement accordingly. The initial recognition date is defined as follows:

- The date of initial recognition is considered the sign off date of the contractual document (overdraft, loan agreement, etc.)
- For off-balance sheet exposures (Letters of Guarantee, Letters of Credit) the date of issuance

In each reporting period, a new assessment of whether there is a significant change in credit risk is performed in order to renew classification and measurement of exposures.

It is noted that an exposure is no longer recognised in the Company’s Statement of Financial Position when; the contractual rights to the cash flow from the asset expire, or the Company transfers the financial asset.

Significant increase in credit risk

For the timely identification of a significant increase in credit risk for an exposure after the initial recognition (SICR) (and the calculation of the lifetime credit loss of the exposure instead of the twelve months credit loss), the default risk at the reference date is compared to the default risk at the initial recognition date for all performing exposures, including those with no days past due (delinquencies).

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.4.4 Impairment (continued)

Significant increase in credit risk (continued)

The assessment for deciding if an exposure shows significant increase in credit risk or not is based on the following three types of Indicators:

- Qualitative Indicators: These refer to the use of qualitative information which is not necessarily depicted in the credit risk rating, as the Early Warning Triggers for the REF loan book. The qualitative indicators are primary drivers for the assessment of the credit risk deterioration. See note 32 for the key triggers description.
- Quantitative Indicators: For the Real Estate Finance (“REF”) loan book, this is the relative credit risk rating deterioration compared to their credit risk rating at initial recognition, namely from category 1,2 or 3 changing to 4 or 5 (‘High Risk’). For the portfolios originated in Greece (Syndicated Bond Loans and Cash Backed Loans) these are classified as Stage 1 unless there’s a risk of credit loss. With regard to the Syndicated Bond Loans, an agreement is in place with Alpha Bank A.E (“the Parent”) that no credit loss will be recognised in the books of the Company in relation to these loans, but instead the loans will be transferred back to the Parent. In relation to the Cash Backed Loans, no credit loss will be recognised as they are fully secured by cash.
- Backstop Indicators: In addition to the above, and with a view to addressing cases where there is no evidence of significant credit risk deterioration based on the quantitative and qualitative indicators, exposures over 30 days past due are considered by definition to show a significant increase in credit risk.

It is noted that if during the previous reporting period, credit losses were calculated for the lifetime of an exposure, but the same conditions no longer apply, then 12 month credit losses will be calculated for the current period.

4.4.5 Modification and derecognition of financial assets

The Company shall derecognise a financial asset in the following cases:

- (a) The contractual rights to the cash flows from the asset expire, or
- (b) The Company transfers the financial asset and the transfer qualifies for derecognition

The Company has not derecognised any financial assets.

4.4.6 Financial liabilities

Financial liabilities are classified as either measured at FVTPL or as other financial liabilities.

Financial liabilities measured at FVTPL

A financial liability is measure at FVTPL when it meets the definition of held-for-trading, or when it is designated as measured at FVTPL.

Other financial liabilities

Other financial liabilities, including deposits and borrowings, are initially measured at fair value, net of transaction costs. Other financial liabilities are subsequently measured at amortised cost.

Derecognition of financial liabilities

A financial liability is derecognised when the obligation under the liability is discharged, cancelled or expired. Where an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and the recognition of a new liability.

4.5 Derivative financial instruments

The Company enters into derivative financial instruments for risk management purposes, principally forward foreign exchange contracts. Derivatives are recognised initially at fair value at the date a derivative contract is entered into and are subsequently remeasured to their fair value at each reporting date. All derivative financial instruments are recognised as assets when their fair value is positive and as liabilities when their fair value is negative.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.6 Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The Company measures fair values using the following fair value hierarchy based on the significance of the inputs used in making the measurements as follows:

- Level 1: Quoted market price (unadjusted) in an active market for an identical instrument.
- Level 2: Valuation techniques based on observable inputs, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
- Level 3: Valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data having a significant effect on the instrument's valuation. This category also includes instruments that are valued based on observable inputs that require significant adjustments based on unobservable inputs.

Valuation techniques include net present value and discounted cash flow models, option pricing models and other valuation models. Assumptions and inputs used in valuation techniques include risk-free and benchmark interest rates, equity index prices and expected price volatilities and correlations.

The aim of valuation techniques is to arrive at a fair value determination that reflects the price of the financial instrument at the reporting date that would have been determined by market participants acting at arm's length.

4.7 Offsetting

Offsetting of assets and liabilities has been implemented as permitted under International Accounting Standard 32 "Financial Instruments: Presentation". Financial assets and liabilities are only offset in Statement of Financial Position only when a legally enforceable right to set off the recognised amounts exists and the Company intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

There are currently no assets and liabilities being offset.

4.8 Hedge accounting

The Company has elected to not yet adopt the hedging requirements under IFRS 9, as permitted by the standard, and continues to apply IAS 39.

Hedge accounting relates to the accounting rules which allow the offset of the effects of the gain or loss from changes in the fair value of a hedging instrument and those from changes in the fair value of a hedged item that would not be allowed if the normal re-measurement principles were followed. Documentation of the hedge relationship upon inception and of the effectiveness of the hedge on an ongoing basis is the basic requirement for the adoption of hedge accounting.

As at 31 December 2018 there were no hedging transactions (2017: None).

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.9 Property, plant and equipment

This caption includes: land; buildings (owned and leased); additions and improvements of leasehold fixed assets; and equipment. Property, plant and equipment are stated at cost less accumulated depreciation. The historical cost includes costs relating to the acquisition of property, plant and equipment.

Subsequent expenditure is capitalised or recognised as a separate asset only when it increases future economic benefits. Expenditure on repairs and maintenance is recognised in the Statement of Profit or Loss as an expense as incurred.

Depreciation is charged on a straight-line basis over the estimated useful lives of property, plant and equipment taking into account residual values.

The estimated useful lives are as follows:

- Additions to leased fixed assets and improvements: to first break clause of the lease.
- Computers and other equipment: 3 to 10 years.

The residual value of property and equipment and their useful lives is periodically reviewed and adjusted if necessary at each reporting date.

Property, plant and equipment is reviewed for impairment, in accordance with the general principles and methodology set out in IAS 36 (“Impairment of Assets”) and the relevant implementation guidance, whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Property, plant and equipment, which is considered to be impaired, is carried at its recoverable amount. Gains and losses from the sale of property, plant and equipment are recognised in the Statement of Profit or Loss.

4.10 Intangible assets – computer software

Software acquired by the Company is stated at cost less accumulated amortisation and accumulated impairment losses.

Expenditure on internally developed software is recognised as an asset when the Company is able to demonstrate its intention and ability to complete the development and use the software in a manner that will generate future economic benefits, and can reliably measure the costs to complete the development. The capitalised cost of internally developed software includes costs directly attributable to developing the software, and is amortised over its useful life. Internally developed software is stated at capitalised cost less accumulated amortisation and impairment.

Amortisation is recognised in the Statement of Profit or Loss on a straight-line basis over the estimated useful life of the software, from the date that it is available for use. The estimated useful life of software is three to five years.

4.11 Leases

Leases are classified as finance leases whenever the terms of the lease transfer substantially all the risks and rewards of ownership to the lessee. All other leases are classified as operating leases. The Company may enter into operating leases as a lessee. Any incentives for the agreement of the new operating lease should be recognised as an integral part of the net consideration agreed for the use of a leased asset, irrespective of the incentive’s nature or the form or the timing of payments.

4.12 Taxation

Income tax expense consists of current tax and deferred tax. It is recognised in the Statement of Profit or Loss, except to the extent that it relates to items recognised directly in equity, in which case it is recognised directly in equity.

Current tax is the expected tax payable on the taxable income for the year, and any adjustments to the tax payable in respect of previous years.

Deferred tax is the tax that will be paid or for which relief will be obtained in the future resulting from the different period that certain items are recognised for financial reporting and tax purposes. It is provided for temporary differences arising between the tax base of assets and liabilities and their carrying amounts in the financial statements.

Deferred tax assets and liabilities are provided based on the expected manner of realisation or settlement using tax rates (and laws) enacted or substantively enacted at the Statement of Financial Position date. A deferred tax asset is recognised to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current assets against current tax liabilities.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.13 Employee benefits

The Company contributes to a defined contribution plan, the expense being charged to the Statement of Profit or Loss as incurred.

A defined contribution plan is where the Company pays fixed contributions into a separate entity. The Company has no legal or constructive obligation to pay further contributions if the fund does not have sufficient assets to pay employees the benefits relating to their employment with the Company in current or prior years.

4.14 Net interest income recognition

Interest income and interest expense are recognised in 'Net interest income' as 'Interest income' and 'Interest expense' in the profit or loss account using the effective interest method.

When applying the effective interest method, interest is recognised in profit or loss in the period to which it relates, regardless of when it is to be paid. Therefore, interest is recognised in the period in which it accrues, even if payment is deferred. In some cases where interest is deemed to be irrecoverable, no interest shall be recognised in profit or loss in the period in which it accrues. However if the unrecognised element of interest is received at a later date, it will be recognised in profit or loss in the period when it was received.

Effective interest method

This is the method that is used in the calculation of the amortised cost of a financial asset or a financial liability and in the allocation and recognition of the interest revenue or interest expense in profit or loss over the relevant period.

Effective interest rate ("EIR")

This is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability to the gross carrying amount of a financial asset or to the amortised cost of a financial liability. When calculating the EIR, an entity shall estimate the expected cash flows by considering all the contractual terms of the financial instrument (for example, prepayment, extension, call and similar options) but shall not consider the expected credit losses. The calculation includes all fees paid or received between parties to the contract that are an integral part of the EIR, transaction costs, and all other premiums or discounts. There is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the cash flows or the expected life of a financial instrument (or group of financial instruments), the entity shall use the contractual cash flows over the full contractual term of the financial instrument (or group of financial instruments).

For financial assets with future cash flows that cannot be estimated with certainty (i.e. overdrafts), the Company's policy is to assume that the EIR is equal to the contractual interest rate. In this case all fees and transaction costs related to the instrument are directly recorded to profit or loss as commission income or expense respectively.

NOTES TO THE FINANCIAL STATEMENTS (continued)

4.14 Net interest income recognition (continued)

For floating interest rate financial assets, the EIR is updated due to the periodic re-estimation of cash flows to reflect movements in market rates of interest.

Interest income recognition

Depending on the classification into staging as described in Note 4.4, interest income is recognised as follows:

- Stage 1 and stage 2 financial assets: interest revenue is calculated by applying the EIR to the gross carrying amount of the financial asset.
- Stage 3 financial assets: interest revenue is calculated by applying the EIR to the amortised cost of the financial asset.

Financial instruments in foreign currency

The policy of the Company is to account for assets denominated in foreign currency in the original currency of the asset. At each balance sheet date, these are translated using the closing rate of the balance sheet date.

Accrued interest recognised in profit or loss is translated using the closing rate at each month end date. Interest income that has already been posted to profit or loss in a previous period is not retranslated with the new exchange rate.

4.15 Net fees and commission income recognition

Fees and commission income, which are not an integral part of the effective interest rate, are recognised on an accrual basis when the relevant service has been provided. If it is an integral component of the effective interest rate on a financial asset or liability it is included in the measurement of the effective interest rate and reported as part of interest income or expense. Incremental costs incurred to generate fee and commission income are charged to fees and commissions expense as they are incurred.

4.16 Net income from other financial instruments measured at FVTPL

Net trading income includes all gains and losses from changes in the fair value of financial assets and financial liabilities held for trading. Specifically, these include foreign exchanges gains and losses on derivative instruments.

4.17 Entity with only one operating segment

An operating segment is a component of the Company that engages in business activities from which it may earn revenues and incur expenses. The Board performs regular reviews of the operating results of the Company and makes decisions using financial information at the entity level. Accordingly, the Board believes that the Company has only one operating segment, being interest and fees earned on its lending and securities portfolio plus fees and commissions from securities and mutual fund transactions executed for customers. The Company does not have any debt or equity instruments which are publicly traded and therefore is outside the scope of IFRS 8 (Operating Segments).

4.18 Investments in subsidiary undertakings

The subsidiary undertakings are accounted for at cost less provision for any impairment. Impairment losses on investments in subsidiary undertakings are measured as the difference between the carrying amount of the financial asset and the estimated recoverable amount.

NOTES TO THE FINANCIAL STATEMENTS (continued)

5. Critical accounting judgements and key sources of estimation uncertainty

In the application of the accounting policies, management are required to make judgements that may have a significant impact on the amounts recognised and make estimates and assumptions about the carrying amounts of the assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

The following are the critical judgements that management have made in the process of applying the accounting policies and that have the most significant effect on the amounts recognised in financial statements.

5.1 Critical judgements in applying the Company's accounting policies

Impairment of loans

The following are the critical judgements, apart from those involving estimations (which are dealt with separately below), that the directors have made in the process of applying the Company's accounting policies and that have the most significant effect on the amounts recognised in financial statements:

- Significant increase in credit risk: As explained in Note 4, ECL are measured as an allowance equal to 12-month ECL for stage 1 assets, or lifetime ECL assets for stage 2 or stage 3 assets. An asset moves to stage 2 when its credit risk has increased significantly relative to credit risk at initial recognition. IFRS 9 does not define what constitutes a significant increase in credit risk. In assessing whether the credit risk of an asset has significantly increased the Company takes into account qualitative and quantitative reasonable and supportable forward looking information. Refer to Note 4.4.4 and Note 32 for more details.
- Identifying assets representing a significant increase in credit risk and the approach to staging. See Note 32 for more details.

5.2 Key sources of estimation uncertainty

Fair Value measurement and valuation process

Fair value measurement and valuation process: In estimating the fair value of a financial asset or a liability, the Company uses market-observable data to the extent it is available. Where such Level 1 inputs are not available the Company uses valuation models to determine the fair value of its financial instruments. Refer to Note 34 for more details on fair value measurement.

Expected credit loss

- Establishing the number and relative weightings of forward-looking scenarios and determining the forward looking information relevant to each scenario: When measuring ECL the Company uses reasonable and supportable forward looking information, which is based on assumptions for the future movement of real estate property prices. Refer to Note 32 for more details, including analysis of the sensitivity of the reported ECL to changes in estimated forward looking information.
- Probability of default: PD constitutes a key input in measuring ECL. PD is an estimate of the likelihood of default over a given time horizon, the calculation of which includes assumptions and expectations of future conditions. See Note 32 for more details, including analysis of the sensitivity of the reported ECL to changes in PD resulting from changes in economic drivers.
- Loss Given Default: LGD is an estimate of the loss arising on default. It is based on the difference between the contractual cash flows due and those that the lender would expect to receive, taking into account estimated cash flows from collateral. See Note 32 for more details.

Gain on foreign exchange	134	200
Other	9	124
Total	143	13,309

NOTES TO THE FINANCIAL STATEMENTS (continued)

10. NET LOSS FROM DERECOGNITION OF FINANCIAL ASSETS

During the year, the Company made no sales of financial assets measured at amortised cost. No such sales happened in the comparative period.

During the year, the Company made sales of financial assets measured at FVTOCI for liquidity management purposes. The below table summarises the carrying amount of the derecognised financial assets measured at FVTOCI, and the gain/(loss) on derecognition, per type of asset, during the current year and the comparative period.

	Year ended 2018		Year ended 2017	
	Carrying amount of derecognised financial assets at amortised cost	Net loss from derecognition	Carrying amount of derecognised financial assets at amortised cost	Net (loss)/gain from derecognition
	£000's	£000's	£000's	£000's
Multilateral development bank bonds	66,015	(2)	24,697	(2)
Other corporate bonds	6,243	-	12,442	1
Total	72,258	(2)	37,139	(1)

11. STAFF COSTS

	2018 £000's	2017 £000's
Wages and salaries	3,632	2,879
Social security contributions	442	367
Expenses of defined contribution plan	461	332
Other	473	496
Total	5,008	4,074

The number of employees (including executive directors) employed by the Company at the end of the financial years are:

	2018 Number	2017 Number
Front Office / Sales and Marketing	23	20
Operations and Admin Support	45	42
Compliance, Risk and Audit	8	6
Other	6	6
Total	82	74

The average number of employees (including executive directors) employed by the Company during the year was 80 (2017: 76).

12. EMOLUMENTS OF DIRECTORS

The remuneration of the directors is as follows:

	2018 £000's	2017 £000's
Emoluments	337	311
Total	337	311

NOTES TO THE FINANCIAL STATEMENTS (continued)

12. EMOLUMENTS OF DIRECTORS (continued)

The above amounts for remuneration include the following in respect of the highest paid director:

	2018 £000's	2017 £000's
Emoluments	162	112
Total	162	112

The emoluments of the highest paid director are partially recharged to several Alpha Bank A.E. group entities. The stated figures above show the portion charged to the Company.

No directors were members of the Company's pension scheme (2017: none).

As at 31 December 2018 there were no loans to the directors of the Company (2017: £nil).

13. GENERAL ADMINISTRATIVE EXPENSES

	2018 £000's	2017 £000's
Premises	633	780
Operating lease rentals	289	683
Business promotion	49	36
Banking	230	305
Communication and travel	155	208
Professional fees	610	565
Information systems	636	573
Office	450	518

Total	3,158	3,799

Professional fees include:

	2018 £000's	2017 £000's
Auditor's remuneration:		
Fees payable to the Company's auditor and their associates for the audit of the Company's annual accounts	116	112
Total audit fees	116	112
Interim review for group reporting	7	7
Total audit related assurance fees	7	7
Interim profit verification	6	-
Total other non-audit fees	6	-
Total non-audit fees	13	7

NOTES TO THE FINANCIAL STATEMENTS (continued)

14. INCOME TAX EXPENSE

	2018 £000's	2017 £000's
Current tax		
Current year:		
UK corporation tax at 19% (2017: 19.25%)	628	2,413
Sub-total	<u>628</u>	<u>2,413</u>
Deferred tax		
(Credit) / charge for the year	(31)	71
Total	<u><u>597</u></u>	<u><u>2,484</u></u>

Factors affecting the tax charge for the year:

	2018 £000's	2017 £000's
Profit before tax	3,583	14,874
Current tax on the above at 19% (2017: 19.25%)	681	2,863
Disallowable expenses	6	39
Tax adjustment prior years	(59)	(489)
Total current tax	<u><u>628</u></u>	<u><u>2,413</u></u>

The Finance (No.2) Act 2015 reduced the corporation tax rate from 20% to 19%, effective from 1 April 2017. The Finance Act 2016 was enacted on 15 September 2016 and reduces the corporation tax rate from 19% to 17% from 1 April 2020. The blended corporation tax rate applied to the reported profit is 19% (2017: 19.25%).

15. NET IMPAIRMENT LOSS ON FINANCIAL ASSETS

	2018 £000's	2017 £000's

Current accounts	3,834	859
Total	3,834	859

As at 31 December 2018 there were no term deposits due to banks maturing more than 12 months after the reporting date (2017: £nil).

25. DUE TO CUSTOMERS

	2018 £000's	2017 £000's
Current accounts	514,173	515,953
Savings accounts	362	339
Notice accounts	197	213
Deposits received as collateral for loans	6,074	5,214
Term deposits	257,364	218,694
Total	778,170	740,413

As at 31 December 2018 and at 31 December 2017 all deposits from customers mature within 12 months of the reporting date.

26. OTHER BORROWED FUNDS

The Company has a subordinated note of £10,000,000, issued to Alpha Bank A.E., which matures on 30 December 2024. It also has a £150,000,000 term loan facility from Alpha Bank A.E, which currently matures on 28 April 2020.

The Company has not made any defaults of principal, interest or other breaches with regard to its subordinated liabilities during 2018 (2017: None).

27. CURRENT INCOME TAX AND OTHER TAXES

	2018 £000's	2017 £000's
Current income tax payable	380	1,000
Total	380	1,000

NOTES TO THE FINANCIAL STATEMENTS (continued)

28. DEFERRED TAX

	2018		
	As at 1 January	Charge to profit or loss	As at 31 December
	£000's	£000's	£000's
Property, plant, equipment and software	(87)	3	(84)
Fair value reserve	(72)	28	(44)
Total	(159)	31	(128)

	2017		
	As at 1 January	Charge to profit or loss	As at 31 December
	£000's	£000's	£000's
Property, plant, equipment and software	(88)	1	(87)
Fair value reserve	-	(72)	(72)
Total	(88)	(71)	(159)

The substantively enacted taxation rate at 31 December 2018 is 19% (2017: 19%). The current taxation rate of 19% remains at 19% from 1 April 2018 until becoming 17% on 1 April 2020.

29. OTHER LIABILITIES

	2018	2017
	£000's	£000's
Accrued expenses	1,979	1,501
Provisions	1	175
Total	1,980	1,676

Accrued expenses include an amount of £31,000 (2017: £107,000) for levies to the Financial Services Compensation Scheme ("FSCS") which exists to provide compensation to retail depositors resulting from the insolvency of UK deposit takers. The compensation paid is funded through loans from HM Treasury and the Bank of England. The levy that is currently paid by the Company represents its portion of the capital repayment and the interest on these borrowings. The ultimate FSCS levy to banks cannot be estimated reliably as it is dependent on numerous uncertain factors, including changes in interest rates, levels of protected deposits, recoveries of assets by the FSCS and the population of FSCS members at any time.

Total	(384)	572

31. CONTINGENT ASSETS, LIABILITIES AND COMMITMENTS

a) Legal and regulatory issues

Banks's business and financial condition can be affected by the actions of various governmental and regulatory authorities in the UK, and the EU and elsewhere. The Bank has engaged, and will continue to engage, in discussions with relevant governmental and regulatory authorities, on an ongoing and regular basis, and in response to informal and formal inquiries or investigations, regarding operational, systems and control evaluations and issues including those related to compliance with applicable laws and regulations, including consumer protection, business conduct, competition/anti-trust, anti-bribery, anti-money laundering and sanctions regimes.

Any matters discussed or identified during such discussions and inquiries may result in, among other things, further inquiry or investigation, other action being taken by governmental and regulatory authorities, increased costs being incurred by the Bank, remediation of systems and controls, public or private censure, restriction of Bank's business activities and/or fines.

There are no pending legal cases in progress which may have a material adverse impact on the Company's financial position (2017: none).

Capital Requirements (Country-by-Country Reporting) Regulations 2013 ("Regulations") requires require institutions to publish annually certain financial information. The Bank has complied with the Regulations in accordance with the provisions of Article 4 "Group disclosure"

b) Tax issues

The Company has no open matters in relation to the possibility that material additional taxes and penalties may be imposed for the unaudited years due to the fact that some expenses may not be recognised as deductible by the tax authorities.

NOTES TO THE FINANCIAL STATEMENTS (continued)

CONTINGENT ASSETS, LIABILITIES AND COMMITMENTS (continued)

c) Operating leases

On 4 January 2017, the Company signed a 15 year lease, with a break-clause after 10 years, for new premises at Capital House, 85 King William Street, London EC4N 7BL. The cost per annum of the rent is £683,829 (2017: £683,829) after amortising the rent-free period. A portion of the expense is recharged out to the other London-based group companies. In 2018 £389,454 were recharged (2017: £nil)

Total future minimum lease payments under non-cancellable operating leases are as follows:

	2018	2017
	£000's	£000's
Within one year	456	456
Between one and five years	3,115	2,659
After five years	2,735	3,647
Total	6,306	6,762

d) Off-Balance Sheet contingent liabilities and assets

	2018	2017
	£000's	£000's
Contingent liabilities		
Letters of guarantee issued	300	307
Undrawn loan commitments	47,414	38,030
Undrawn overdraft facilities which are revocable	9,319	20,449
Total	57,033	58,786

	2018	2017
	£000's	£000's
Contingent assets		
Letters of guarantee received	300	563
Total	300	563

e) Service level agreement

Settlement of cheque, credit card, Faster Payments and BACS payment processing was outsourced under a service level agreement by the Company to HSBC, a PRA approved bank. The cost incurred in 2018 was £28,437 (2017: £25,245).

RISK MANAGEMENT

32. FINANCIAL RISK MANAGEMENT

32.1 Overview

The Board of Directors has overall responsibility for the establishment and oversight of the Company's objectives, policies and processes for measuring and managing risk, and the management of capital. The Board has established an Audit, Risk & Compliance Committee which reviews and assesses the Company's risk appetite. On a day-to-day basis the Company's risk management policies are overseen by the Executive Committee, Management Committee, Credit Committee, Asset and Liability Committee, Bad & Doubtful Debts Committee and Risk Management Department.

The Company's financial instruments, other than derivatives, principally comprise loans and deposits that arise from its operations as a lending and deposit-taking institution. It also has a portfolio of debt securities held for investment and liquidity purposes, predominantly consisting of securities qualifying as part of the liquid assets buffer.

The main risks arising from the Company's financial instruments are credit risk, market risk and liquidity risk. Market risk includes market price risk, interest rate risk and foreign exchange risk. The Company's objectives, policies and processes for measuring and managing these risks are described below and are the same as those in place in the previous year. The Board approves the Company's Risk Appetite Statement annually.

32.2 Derivatives and other financial instruments

The Company enters into a small number of derivative transactions, principally forward foreign exchange contracts. The purpose of these transactions is to manage the currency risks arising from the Company's operations.

It is, and has been throughout the year under review, the Company policy that no trading in financial instruments shall be undertaken.

32.3 Credit risk

Credit risk is the risk that a customer or counterparty will default on its contractual obligations resulting in financial loss to the Company. The Company's main income generating activity is lending to customers and therefore credit risk is a principal risk. Credit risk mainly arises from loans and advances to customers and other banks (including related commitments to lend such as loan facilities, investments in debt securities and derivatives that are an asset position). The Company considers all elements of credit risk exposure such as counterparty default risk, geographical risk and sector risk for risk management purposes.

Credit Risk Management

The Company's overall Credit Risk Appetite is expressed through its Risk Appetite Framework and evidenced by its risk management policies (qualitative/descriptive) together with the exposure and authorisation limits (quantitative) that are in place.

The policy regarding lending to bank and non-bank counterparties, countries and industries is set out in the International Network Credit Manual and more specifically in ABL's Lending Policy Statement, which is subject to review by the Board.

The Bank has in place an internally defined, limit-based system to facilitate credit risk control and monitor actual risk-taking against a predetermined credit risk appetite. Exposure limits are set for individual borrowers and groups of connected borrowers as well as for certain industries, economic sectors and geographic regions to control concentration risk, in line with the Bank's risk appetite and business strategy.

The Company uses two internal ratings to measure credit risk, one for real estate loans and one for non-real estate loans, mainly Syndicated Bond Loans originated from Alpha Bank A. E. ("ABAE"). The two rating systems are mapped into five credit risk zones to give a single view across the entire portfolio. The real estate loans migrated to the current internal rating system (Categories 1, 2, 3, 4, and 5) from the old system (Ratings A to D2) during 2017-2018.

The limits established are constantly monitored and are subject to a regular review by the responsible (based on the amount of the limit) approval body. Limits relating to specific sectors and countries are examined and approved by the Board of Directors and are included in the Company's Risk Appetite Framework.

The Company's exposure to credit risk is determined by the counterparties with whom the Company conducts business, as well as the markets and countries in which those counterparties conduct their business. Counterparty and country limits are in place and the Company performs credit appraisal procedures prior to advancing any facilities. The Company also has policies on the levels of collateral required for secured facilities

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.3 Credit risk (continued)

The Credit Risk Management has the following governance in place:

- The Company's Board of Directors reviews and approves the Risk Appetite Framework, Lending Policy Statement, Classification and Measurement policies and Impairment policies.
- The Credit Risk Committee of the Company has an oversight of the credit risk activities and the implementation of relevant strategy. The Committee is responsible for the evaluation of the adequacy and the effectiveness of policies and procedures of Company's credit risk management regarding credit risk taking including portfolio risks, the monitoring and management by business line, geographic area, product activity and sector. The Committee will consider, and where appropriate approve, any necessary mitigating actions. The Committee is also responsible for adopting and maintaining Company's risk grading to categorise exposures according to the degree of risk of default. The Committee is also responsible for developing and maintaining Company's processes for measuring ECL, including monitoring of credit risk, incorporation of forward looking information and the method used to measure ECL.
- Credit Committees approve individual credit limits and loan applications based on their delegated authority level.
- The Internal Audit function performs regular audits making sure that the established controls and procedures are adequately designed and implemented.

IFRS 9 classification

The classification summary of assets and liabilities is presented in Note 2.1.

Significant increase in credit risk (Stage 2)

As explained in note 4.4.4 the Company monitors all financial assets that are subject to impairment requirements to assess whether there has been a significant increase in credit risk since initial recognition. If there has been a significant increase in credit risk the Company will measure the loss allowance based on lifetime rather than 12-month ECL.

This is assessed using qualitative and quantitative indicators.

The qualitative indicators are the primary indicators for credit risk deterioration and are used to capture information that is not necessarily depicted in a timely fashion through the internal credit rating. The Company has a comprehensive list of indicators described in its Early Warning Credit Risk Triggers document. The trigger events are reported by all business lines involved in the lending process and credit risk monitoring and logged by Credit Risk Management. The events are evaluated every impairment cycle by the Credit Risk Committee and an expert judgement is made whether the event represents a significant increase in credit risk or not. The most significant types of events are:

- Missed principal or interest repayment
- Moving to watch list status
- Unarranged overdrafts
- Significant deterioration in the market / sector / location in which the borrower operates
- Breach of covenants
- Adverse press publications
- Accidents and damage to the property collateral

The primary quantitative indicator is the internal credit rating score. The Company uses an internal credit rating method, where the source of repayment and recovery of the loan granted depends primarily on the cash flows generated by the asset. The following areas are assessed using the model:

- Financial strength (Financial Ratios, Stress Tests)
- Political and Legal Environment (Country outlook, political environment)
- Asset Characteristics (Location, Lease Agreement Tenor)
- Strength of Sponsor (Sponsor quality and willingness to support the property)
- Security Package (Nature of Lien, Insurance, Margin Accounts)

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.3 Credit risk (continued)

The assessment using the model will allocate the borrower into the one of the first four ratings in the table below (the assessment is performed at origination and annually thereafter):

Rating
1 Strong
2 Good
3 Satisfactory
4 Weak
5 Default

The Company estimates that a relative change in the internal rating from 1, 2 and 3 at origination to 4 at the reporting date represents a significant increase in credit risk and the assets will be reclassified from Stage 1 to Stage 2. The Company's current appetite is to grant loans with a rating of 3 and above at origination.

In addition, loans will automatically be moved to Stage 2 if certain "backstop" events occur. This includes arrears of greater than 30 days past due and the granting of certain concession events such as forbearance, where full repayment of principal and interest is expected.

Non performing exposures and definition of default (Stage 3)

A loan is non-performing where it is considered unlikely that the borrower will repay its credit obligations in full, without recourse to actions such as realising security. Loans will be classified as credit impaired in any of the following circumstances:

- The exposure is more than 90 days past due.
- Legal actions have been undertaken by the Company.
- It is assessed as Unlikely to Pay (UTP)

Use of forward looking economic information

Forward looking economic information is incorporated into the measurement of provisions in two ways: as an input to the calculation of ECL and as a factor in determining the staging of an asset. Expectations of future economic conditions are incorporated through modelling of multiple economic scenarios (MES).

The use of multiple economic scenarios ensures that the calculation of ECL captures a range of possible outcomes. The IFRS 9 ECL provision reported in the accounts is therefore the probability-weighted sum of the provisions calculated under a range of economic scenarios.

The Company has adopted the use of five economic scenarios (grouped into base, upside and downside scenarios). The scenarios and the weightings are derived using external data and together with management judgement.

Below is a summary assumptions and forward looking information used as at 31 December 2018, together with the sensitivity analysis per scenario:

Scenarios	Macro economic factor: property price move 1 year	Scenario probability	ECL before probability weighting	ECL sensitivity to 1% increase in scenario probability
Scenario 1	-40%	2%	457,533	4,575
Scenario 2	-30%	4%	106,004	1,060
Scenario 3	-10%	50%	3,782	38
Scenario 4	0%	34%	-	-
Scenario 5	5%	10%	-	-
Weighted / Total	-7%*	100%	15,282**	

* Against a Savill's forecast of -2% in 2019 and +4.5% over 5 years to 2023, see Savill's website, mainstream residential forecast data

** Including off-balance sheet

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.3 Credit risk (continued)

Due to the specific profile of the Company's loan book, which consists mainly of real estate loans, only one economic variable is incorporated in the scenarios – the forecasted movement in property prices (house price / commercial property indices). The index movement used as at 31 December 2018 ranges from +5% for the upside scenario to -40% for the worst downside scenario. Other indicators such as GDP were considered but not used as the Company does not have unsecured lending.

Measuring credit losses

Expected Credit Loss (ECL) is calculated using the following formula

$$\text{Probability of default ('PD')} \times \text{Exposure at default ('EAD')} \times \text{Loss given default ('LGD')}$$

Term	Definition
Probability of default (PD)	The probability of a default event occurring based on conditions existing at the reporting date and future economic conditions that affect credit risk. Probability of default has been determined based on Basel III regulatory PDs. The lifetime PD forms part of the IFRS 9 stage assessment as well as the ECL calculation.
Exposure at default	The expected outstanding balance of the asset at default, considering the repayment of principal and interest from the reporting date to the date of default.
Loss given default	The proportion of the exposure that is expected to be lost in the event of default, taking account of the impact of collateral and its expected value at the point of realisation.

To calculate the lifetime ECL for a loan, separate 12 month ECL calculations are performed for each year of the loan's expected life. The outputs of these calculations for each year are then combined.

The PD, EAD and LGD inputs for the 12 month ECL calculations incorporate management's expectations of future performance, including forward looking economic assumptions. To reflect the uncertainty inherent in economic forecasting, multiple ECL calculations are performed using different sets of assumptions (scenarios) that are considered possible. The provisions reported at 31 December 2018 incorporate the results of scenarios which have been weighted according to management's assessment of their likelihood.

The tables below show the Company's exposure to credit risk based on the Company's internal credit rating system and the markets and countries in which the Company's customers conduct their business. As at 31 December, these exposures are as follows:

32.3.1 Credit risk - loans and advances to customers, due from banks and investment securities

Loans and advances to customers at amortised cost	2018			2017	
	Stage 1	Stage 2	Stage 3	Total	Total
	12-month ECL	Lifetime ECL	Lifetime ECL		
	£000's	£000's	£000's	£000's	£000's
Credit Rating Zone:					
Low risk - Category 1	12,456	-	-	12,456	28,252
Medium Risk - Category 2	173,189	-	-	173,189	116,546
Acceptable Risk – Category 3	100,963	-	-	100,963	97,306
Watch List/High Risk - Category 4	32	557	996	1,585	33
Default - Category 5	42	-	1,620	1,662	1,598
Unrated	47	-	-	47	120
Total gross carrying amount	286,729	557	2,616	289,902	243,855

The presentation follows the FINREP convention showing the location of the borrower for all classes of assets.

Supranational organisations include European Investment Bank debt securities of £183,222,164 (2017: £218,634,996).

The Company's maximum credit exposure is £897,924,000 (2017: £869,646,000) including derivatives and committed undrawn facilities. The table below shows further breakdown.

	2018 £000's	2017 £000's
Due from banks at amortised cost (including derivatives)	144,609	170,294
Loans and advances at amortised cost (including committed undrawn facilities)	346,127	302,918
Investment securities at FVTOCI	407,188	396,434
Total	897,924	869,646

32.3.3 Loans and advances to customers: impairment analysis

As at 31 December 2018

	Gross carrying amount £000's	ECL £000's	Net carrying amount £000's
Not past due (current)	287,035	(14)	287,021
Past due from 1 to 29 days	-	-	-
Past due from 30 to 59 days	538	-	538
Past due from 60 to 89 days	10	-	10
Past due over 90 days	2,319	(494)	1,825
Total	289,902	(508)	289,394

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.3 Credit risk (continued)

As at 31 December 2017

	Gross carrying amount £000's	ECL £000's	Net carrying amount £000's
Not past due (current)	242,298	-	242,298
Past due from 1 to 29 days	-	-	-
Past due from 30 to 59 days	-	-	-
Past due from 60 to 89 days	-	-	-
Past due over 90 days	1,557	(528)	1,029
Total	243,855	(528)	243,327

The carrying amount of loans which are individually impaired is written down to the recoverable amount of all expected future cash flows, discounted using the original effective interest rates. There were no loans written off during the year (2017: none).

Modified financial assets

Financial assets (with loss allowance based on lifetime ECL)	Year ended 2018 £000's	Year ended 2017 £000's
Gross carrying amount before modification	994	-
Loss allowance before modification	-	-
Net amortised cost before modification	994	-
Net modification gain / (loss)	-	-
Total	994	-

There were no instances where the Company waived material financial covenants (2017: none).

32.3.4 Loans and advances - collateral analysis

At the year-end, fully secured lending accounts for 99% (2017: 99%) of the loans and advances to customers. A breakdown of the fully collateralised lending is summarised in the table below. Collateral may consist of property, cash or guarantees. The fair value of the collateral exceeds the carrying amount of the loan in all cases (except for impaired loans) and as such the value of the loan is shown and not the value of the collateral. Formal valuations of collateral are obtained prior to disbursement of all loans. These valuations are periodically updated to 'desktop valuations' using the land price index from the HM Land Registry, in the case of residential accommodation, and by using the latest CBRE review of Prime Rents and Yields for commercial investment properties in the UK.

Collateralised loans	2018 £000's	2018 £000's	2017 £000's	2017 £000's
	Gross exposure	ECL	Gross exposure	ECL
LTVs < 40%	80,620	-	57,664	-
LTVs > 40% < 50%	94,666	-	83,114	-
LTVs > 50% < 60%	73,326	-	60,249	-
LTVs > 60% < 70%	5,883	(1)	3,949	-
LTVs > 70% < 80%	15,956	(6)	17,453	-
LTVs > 80% < 100%	3,599	(4)	7,709	(528)
LTVs >= 100%	11,927	(494)	9,054	-
Cash collateralised lending	2,981	-	2,960	-
Other collateralised lending	658	(3)	920	-
Unsecured lending (Syndicated Bond Loans and other loans)	286	-	783	-
Total of collateralised lending	289,902	(508)	243,855	(528)

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.4 Market risk

32.4.1 Overview

Market risk is the risk of losses arising from unfavourable changes in the value or volatility of interest rates, foreign exchange rates and credit spreads that will affect the Company's income and/or value of its holdings of financial instruments. Losses may also occur either from the FVTOCI portfolio or from the asset liability management. The objective of market risk management is to maintain market risk exposures within acceptable parameters. The Company has a portfolio of debt securities held for investment and liquidity purposes, predominantly consisting of securities qualifying as part of the liquid assets buffer. It is the Company's policy to hold all such securities as FVTOCI. Management monitor market price movements of the financial instruments held, and these details are circulated for review to the Board of Directors.

32.4.2 Interest rate risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company principally borrows and lends to customers at floating rates of interest. Occasionally it may lend to customers at a fixed interest rate, in which the resulting interest rate risk is naturally hedged through the equity of the liability side.

At 31 December 2018 the Company had one fixed rate loan with a carrying amount of £7,185,000 (2017: £nil).

Key management personnel use a variety of sources to monitor interest rate risk, including a review of regulatory returns and various other ad hoc reports.

32.4.3 Interest rate profile

A 2% rise in interest rates is estimated to increase net interest income by £169,000 (2017: £329,590). This is calculated in line with guidance from the Prudential Regulation Authority.

The table below summarises the re-pricing mismatches on the Company's non-trading book as at 31 December. Items are allocated to time bands by reference to the earlier of the next contractual interest rate re-pricing date and the maturity date.

INTEREST RATE PROFILE AT 31.12.2018

32.5 Liquidity risk

Liquidity risk is the risk that the Company will not have sufficient funds to meet the obligations or commitments associated with its financial instruments. The Company's exposure to liquidity risk is managed based on policies agreed with the Prudential Regulation Authority. These include the holding of sufficient immediately available cash or marketable assets, ensuring asset and liability cash flows are appropriately matched and having the ability to arrange further borrowing if required. Customer retail deposits are protected by a liquid assets buffer.

A maturity analysis is set out below. Cash flows arising from all liabilities are estimated and classified into relevant time periods, depending on when they occur. Management have used current interest rates to estimate future interest cash flows. The table below analyses liabilities into relevant maturity groupings based on the remaining period at the Statement of Financial Position date to the contractual maturity date and estimated interest outflows.

NOTES TO THE FINANCIAL STATEMENTS (continued)

32.6 Capital management

The Company's objectives when managing capital are to:

- Safeguard the Company's ability to continue as a going concern;
- Comply with the capital requirements set by its regulators at all times; and
- Maintain a strong capital base to support the future strategy and development of the business.

It is also the Company's policy to maintain a sufficient buffer to meet exigencies.

The Company is subject to minimum capital requirements imposed by the Prudential Regulatory Authority ("PRA") following guidelines developed by the Basel Committee on Banking Supervision and implemented in the United Kingdom by the European Union Capital Requirements Directive and Regulation (together known as "CRD IV"). Under this framework the Company has elected to adopt the standardised approach for credit and market risk, and the basic indicator approach for operational risk. The minimum requirement set by the PRA, known as the Company's Individual Capital Guidance ("ICG"), is expressed as a percentage of total capital to total risk-weighted assets together with a capital planning buffer.

The Company calculates its capital requirement and compares it with its ICG monthly. During the year no breaches of externally imposed capital requirements have been reported.

The Company's regulatory capital is set out below and includes Tier 1 capital (share capital, retained earnings and the fair value reserve) and Tier 2 capital (subordinated debt).

Regulatory capital analysis

	2018	2017
	£000's	£000's
Tier 1		
Share capital	30,000	30,000
Retained earnings	20,915	28,929
FVTOCI reserve	(384)	572
Intangible assets	(57)	(140)
Total Tier 1 capital	50,474	59,361
Tier 2		
Subordinated debt (excluding accrued interest)	10,000	10,000
Total Tier 2 capital	10,000	10,000
Total Tier 1 and Tier 2 capital	60,474	69,361
Total regulatory capital	60,474	69,361

NOTES TO THE FINANCIAL STATEMENTS (continued)

33. RELATED PARTY TRANSACTIONS

A number of banking transactions are entered into with related parties in the normal course of business and include loans, deposits and foreign currency transactions. The outstanding balances at the year-end, and the related income and expense for the year are as follows:

As at 31 December 2018	Parent	Fellow subsidiaries/ affiliates	Key management personnel	Entities controlled by key management	Associated companies
	£000's	£000's	£000's	£000's	£000's

All related party transactions were made on an arm's length basis.

NOTES TO THE FINANCIAL STATEMENTS (continued)

34. FAIR VALUE OF FINANCIAL INSTRUMENTS

Financial instruments include financial assets and liabilities. The following sets out the Company's basis for establishing fair values for each category of financial instrument:

- Cash and balances at central banks; the fair value is their carrying value.
- Due from banks; the fair value of floating rate placements and overnight deposits is their carrying value.
- Loans and advances to customers; a very significant portion of the loans and advances as at 31 December 2018 are at variable rates and re-price in response to changes in market rates, generally within three months. Credit spreads are not deemed to have changed materially during the year. In addition, the loan portfolio is highly collateralised. Therefore, the fair value of this book has been estimated to be approximately equal to the carrying value. The fair value of impaired assets is measured as the present value of estimated future cash flows (including any collateral held and the costs of realising the collateral) discounted at the asset's original effective interest rate.
- Deposits from banks and customers; the fair value of deposits with a residual maturity of less than one year has been generally estimated to be approximately equal to the carrying value.
- Investment securities; the fair value is their carrying value as all investment securities are listed and the fair value is based upon quoted market prices.
- There were no transfers between levels 1, 2 and 3 during the year (2017: none).

Set out below is a comparison by category of book values and fair values of the Company's financial assets and liabilities as at 31 December, grouped into Levels 1 to 3 based on the degree to which the fair value is observable.

- Level 1 fair value measurements are those derived from quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 fair value measurements are those derived from inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and
- Level 3 fair value measurements are those derived from valuation techniques that include inputs for the asset or liability that are not based on observable market data (unobservable inputs).

As at 31 December 2018	Carrying value	Fair value	Level 1	Level 2	Level 3
	£000's	£000's	£000's	£000's	£000's
